Security Team Approval	Not required — endpoint UX setting, no security control affected (<i>confirm</i>)

Short description

Disable Windows toast (pop-up) notifications on end-user workstations.

Description

Toast notifications currently appear on user screens throughout the workday. Because they pop up over the task a user is actively working on, users often confirm or dismiss them without realizing what was asked, causing accidental confirmations. This change disables toast notifications fleet-wide.

Planning

Justification

Toast pop-ups interrupt daily work and cause accidental confirmations because users click them without reading. Disabling them removes a recurring interruption and prevents unintended actions.

Implementation plan

1. Configure policy to disable toast notifications via GPO or Intune (User Configuration → Administrative Templates → Start Menu and Taskbar → Notifications → "Turn off toast notifications", or the Intune equivalent).
2. Scope the policy to a pilot device group first.

3. Validate on the pilot group.
4. Roll out to the remaining user/device groups in rings.
5. Confirm application through management reporting.

Risk and impact analysis

Low risk. Users will no longer receive on-screen toast pop-ups, which also suppresses some legitimate app/system notifications. No data loss and no change to application functionality. Fully reversible through policy. Mitigation: critical notifications are delivered through email/other channels.

Backout plan

Remove or disable the policy setting and force a refresh (`gpupdate /force` or Intune sync). Notifications are restored at the next policy refresh or logon.

Test plan

On a pilot device, apply the policy and confirm no toast notifications appear during normal use of common applications, and that application functionality is unaffected.

Schedule

Planned start	[To be completed]
Planned end	[To be completed]
Maintenance window	[To be completed]

Conflicts

Conflict check not yet run (status: Not Run). No known conflicting changes.

Notes

None.

Closure Information

Production Validation Details

After rollout, confirm on a sample of production machines that toast notifications no longer appear during normal work.

Major User Impact Details

Users will no longer see on-screen toast pop-ups. Minimal impact expected; this directly addresses complaints about interruptions and accidental clicks.

Monitoring Details

Monitor the service desk for any “missed notification” reports and verify the policy is applied via Intune/GPO reporting.

Fields marked [To be completed] are organization-specific and should be filled in before submission.
